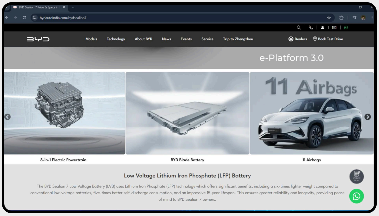
Weak Emotional First Impression

The hero section is flat and informative, with no visual drama, contrast, or emotional hook to immediately catch attention or interest the viewers.

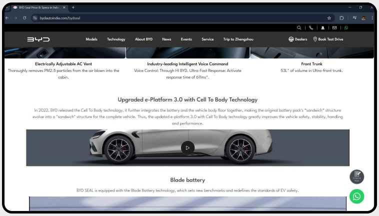


Low Voltage Lithium Iron Phosphate (LFP) Battery

The BYD Sealion 7 Low Voltage Battery (LVB) uses Lithium Iron Phosphate (LFP) technology which offers significant benefits, including a six-times lighter weight compared to conventional low-voltage batteries, five-times better self-discharge consumption, and an impressive 15-year lifespan. This ensures greater reliability and longevity, providing peace of mind to BYD Sealion 7 owners.

Feature-Led, Not Story-Led Layout

The page structure emphasizes specs and feature blocks over a unified story, making the experience feel fragmented rather than immersive.



Electrically Adjustable AC Vent
Thoroughly removes PM2.5 particles from the air blown into the cabin.

Industry-leading Intelligent Voice Command
Voice Control: Through HI BYD. Ultra-Fast Response: Activate response time of 611ms*.

Front Trunk
53L* of volume in Ultra-front trunk.

Upgraded e-Platform 3.0 with Cell To Body Technology

In 2022, BYD released the Cell To Body technology, it further integrates the battery and the vehicle body floor together, making the original battery pack's "sandwich" structure evolve into a "sandwich" structure for the complete vehicle. Thus, the updated e-platform 3.0 with Cell To Body technology greatly improves the vehicle safety, stability, handling and performance.

Blade battery

BYD SEAL is equipped with the Blade Battery technology, which sets new benchmarks and redefines the standards of EV safety.

Inconsistent Visual Hierarchy

There is no strong focal point or clear content prioritization, causing multiple elements to compete for attention and increasing visual clutter.

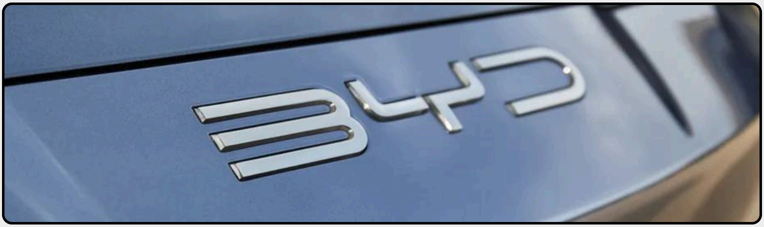
NFC Card Key
Hand-free Electrically Operated Tailgate
20-inch Wave Swing Wheel Hub

Weak Scroll Flow and Visual Rhythm

The transition between sections is abrupt, with little visual rhythm, leaving the scroll experience feeling linear and content-heavy rather than entertaining.



Limited Perceived Premium and Trust Through Design

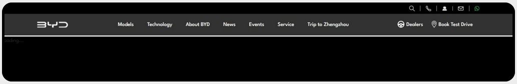
The UI lacks refined detailing, immersive imagery, and expressive typography that help convey craftsmanship, innovation, and confidence, reducing perceived brand value.

User-Centered Design Evaluation

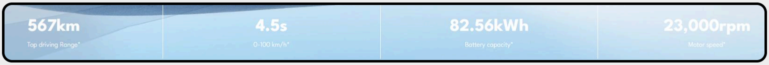
UCD PRINCIPLE	WHAT WAS EVALUATED	SATISFACTION RATING
Usefulness	Addresses EV buyer needs through model info, specs, and dealer access	★★★★☆
Effectiveness	Ability to complete tasks like exploring models and contacting dealers	★★★☆☆
Learnability	Ease for first-time users to understand navigation and structure	★★★★☆
Accessibility	Support for users with diverse abilities and constraints	★★☆☆☆
Efficiency	Speed and smoothness of completing tasks	★★★★☆
Satisfaction	Overall emotional and visual experience	★★★☆☆

Nielsen’s 10 Usability Heuristics

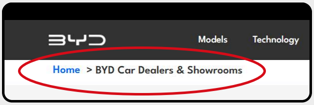
1. **Visibility of System Status:** Page transitions, section loads, and form interactions provide minimal visual feedback, making the interface feel unresponsive at times.



2. **Match Between System & the Real World** BYD uses familiar automotive terms, but the presentation feels technical and feature-heavy.

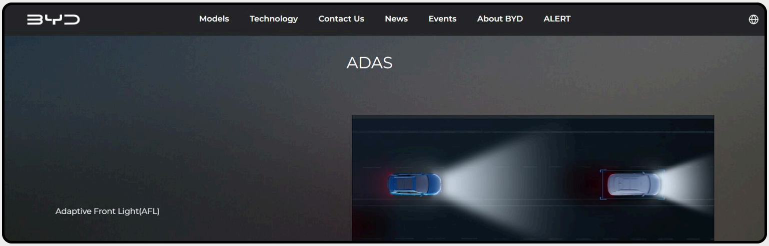


3. **User Control & Freedom:** Deep navigation paths make it harder to jump back to key sections like models or contact.



Home > BYD Car Dealers & Showrooms

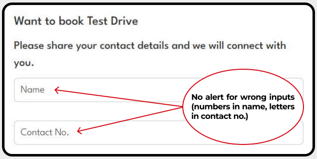
4. **Consistency & Standards:** Fonts and colors are consistent, but spacing, card styles, and CTA treatments vary across sections.



ADAS

Adaptive Front Light(AFL)

5. **Error Prevention:** Forms and interactions don't visually guide users to avoid mistakes.



Want to book Test Drive

Please share your contact details and we will connect with you.

Name

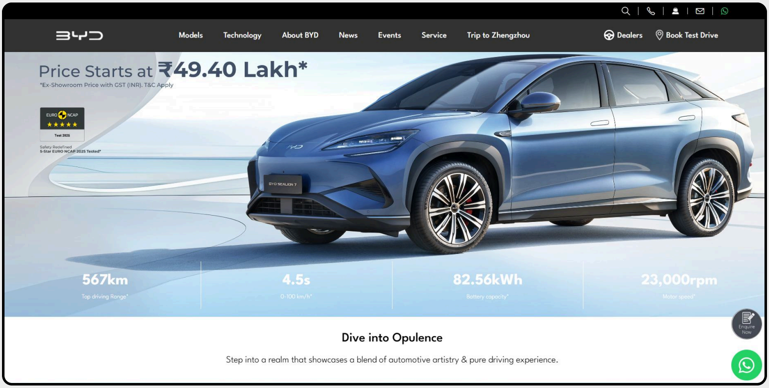
Contact No.

No alert for wrong inputs (numbers in name, letters in contact no.)

6. **Recognition Rather Than Recall:** Users must recall where certain actions (test drive, contact, models) are located after navigating away.

7. **Flexibility & Efficiency of Use:** The site treats all users the same, offering no shortcuts or quick actions.

8. **Aesthetic & Minimalist Design:** The design is clean, but content density is high and sections feel informational rather than purposeful.



Price Starts at ₹49.40 Lakh*

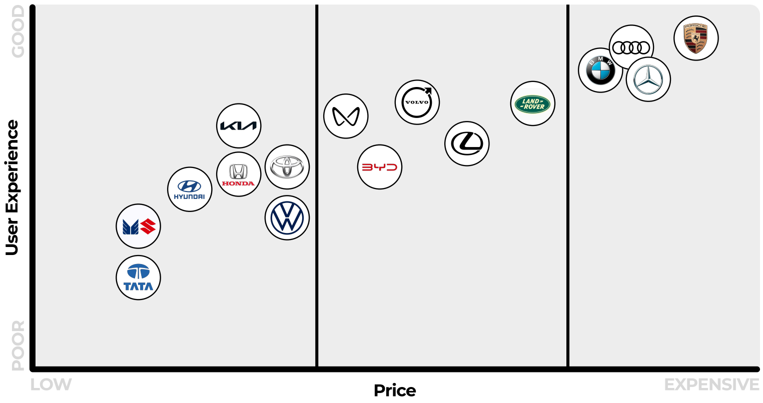
Dive into Opulence

Step into a realm that showcases a blend of automotive artistry & pure driving experience.

9. **Help Users Recognize, Diagnose, & Recover from Errors:** Error states are either subtle or not visually emphasized.

10. **Help & Documentation:** Contact and support exist but are not visually prioritized.

Automobile Brand Website Rankings



Note: Price placement is approximate based on each brand's typical market positioning (entry-level to premium). UX position comes from aggregated common UX feedback. This isn't official survey data but a well-informed comparative dataset for visualization.

Competitive Analysis

For the competitive analysis, **Hyundai** is considered as a representative of lower-priced automobile brands with a well-designed website and satisfactory user experience, **BYD** as the primary focus of this study, and **Porsche** as the benchmark for best-in-class UI and user experience and a representative of higher-priced automobile brands.

	IMPACT	HIERARCHY	NARRATIVE	GUIDANCE	PERCEPTION
Porsche	Bold hero visuals create an instant emotional hook and premium feel	Strong focal points and spacing guide the eye effortlessly	Experience-led storytelling that flows smoothly on scroll	Clear, prominent CTAs that naturally guide user actions	Refined visuals and typography convey strong premium value
Hyundai	Clean and clear first impression, but more functional than emotional	Structured layouts with clear sections, slightly content-heavy	Product-focused storytelling with limited emotional depth	Visible CTAs, though sometimes secondary to content	Trustworthy and approachable design language
BYD	Flat, informational hero with low visual drama and impact	Weak prioritization; elements compete for attention	Feature-driven layout with minimal narrative flow	CTAs blend into UI and lack visual urgency	Limited refinement reduces perceived brand value

Summary:

- UI maturity differs clearly across brands
- Visual hierarchy and first impression are key differentiators, storytelling elevates experience
- Clear guidance improves usability

- Perceived brand value is shaped by UI polish

Defined Research Goal

To evaluate the usability and user experience of the BYD website in terms of information clarity and visual hierarchy, and to identify design gaps that affect user engagement, trust, and decision-making during the car exploration.

Target Audience

5 Urban Indian tech-aware automobile enthusiasts aged 20–60 who have an interest in electric vehicles and visit the BYD website to explore about this trending EV brand.

User Scenarios

Scenario 1 - A first-time visitor interested in buying an electric SUV visits the BYD website to explore available models and understand whether the brand fits their needs and budget.

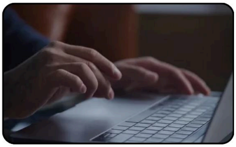
Scenario 2 - A user who is aware of the BYD SEAL visits the website to explore its specifications

Storyboarding

FRAME 1

A user exploring premium electric cars struggles to narrow down options due to the crowded and competitive EV market.

FRAME 2



He browses countless articles and reviews, feeling overwhelmed while trying to identify the best electric cars in India.

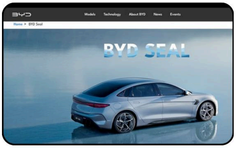
FRAME 3

He realizes that BYD, a brand that he was aware of, is emerging as a strong contender in India's premium electric vehicle space.

FRAME 4

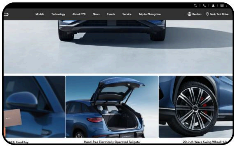
He explores the range of models offered by BYD and visits the website, which initially appears usable and intuitive.

FRAME 5



After discovering a model he likes, he scrolls down with excitement, but the experience suddenly shifts, disrupting his flow.

FRAME 6



Although he found all the necessary information, he didn't feel emotionally connected due to the lack of storytelling.

Task Flow

Find and explore a specific BYD car model
Task: Locate a model (take BYD SEAL) and understand its key features and benefits.

Flow - **Go to the BYD Website → Search for BYD Seal → Scroll through sections → Understand key features**

USABILITY TESTING PLAN

Pre-Testing
February 24-25th, 2026.

Testing
March 9th-17th, 2026.

Post-Testing
March 18th, 2026.

Pre-Testing

Number of Participants – Why 5?

As this is an early-stage usability test, a small but focused group of individuals is both efficient and cost-effective while uncovering significant usability issues. Also, I know five people that are great car enthusiasts, which will be extremely useful for this study rather than just picking random people.

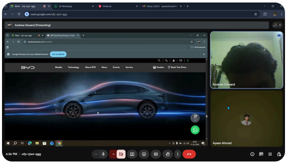
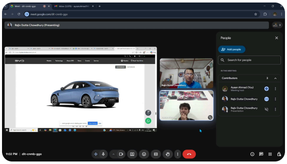
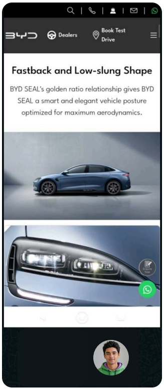
Testing







Fastback and Low-slung Shape

BYD SEAL's golden ratio relationship gives BYD SEAL a smart and elegant vehicle posture optimized for maximum aerodynamics.

Participant 1: Mudassir Shah, 21

Remote Testing (Mobile Phone)

User Type: Moderate digital student and automobile enthusiast

Duration - 19:07 mins.

Experience with Car Websites: Moderate – familiar with browsing car models online

Observations
- The public notice screen created initial confusion and slowed the user at the beginning.
- The home screen felt small, making it harder to immediately locate the car models.
- Initially, the user struggled to locate the model section.

Positive Aspects
- Features are clearly highlighted.
- Categorization of headings and descriptions is well structured.
- Content is readable, concise, and not too bulky.
- The interface is comfortable to navigate and visually appealing.

User Feedback

The task became easier after the initial navigation challenge. The user suggested that the front page could be better organized to match user expectations more clearly.

User Rating: 9/10

Observations
- The “Change Model” and “Configure” options appear early, making navigation intuitive.
- The “Technical Details” section is separated, which avoids information overload.
- The website uses high-quality images and slideshow highlights, prime visual engagement.

Positive Aspects
- Car customization features (color, wheels, etc.) are interactive and impressive.
- The content hierarchy is clear, the video section at the end enhances engagement.
- Animations, highlights, and layout make the website feel modern and stylish.
- The “Customize Your Own Car” feature is highly engaging.

User Feedback

The user found the Porsche website very easy to navigate with no confusion during the tasks. The design felt aesthetic, modern, and interactive.

User Rating: 10/10

Participant 2: Mayank Chandak, 21

In-person Testing (Laptop)

User Type: Tech-savvy student and a dedicated automobile enthusiast

Duration - 11:20 mins.

Experience with Car Websites: High – keeps himself updated with automotive trends

Observations
- The user searched directly using the search icon instead of scrolling through homepage.
- The search redirected correctly to the BYD Seal page, making the model accessible quickly.
- The video on the page gave a poor playback experience that felt more like a GIF than a smooth video.

Positive Aspects
- The presentation of the page felt visually appealing.
- Key features were highlighted clearly.
- Information about the vehicle was structured and easy to understand.

User Feedback

Add more specifications. Introduce a configurator feature, similar to what other automobile websites provide.

User Rating: 6/10

Observations
- The user quickly found the model from the homepage without confusion.
- Navigation felt clear and intuitive.

Positive Aspects
- The car configurator was enjoyable and interactive.
- The user liked scrolling through highlights and sliders.
- The video auto-play feature improved engagement.
- The interface felt modern and visually distinctive.
- Overall presentation and layout were excellent.

User Feedback

The website felt engaging, well-organized, and easy to navigate, which created a smooth and satisfying browsing experience.

User Rating: 10/10

Participant 3: Andrew Howard, 20
User Type: A Hard-core automobile enthusiast with extreme knowledge
Experience with Car Websites: High – used multiple configurators

Remote Testing (Laptop)
Duration - 31:25 mins.

Observations
- High-resolution images with large screen coverage slowed down loading time.
- Some information was repeated (e.g., infotainment system), increasing scroll length.
- The specifications section (tables) was well structured but contained too much information, causing cognitive overload.

Positive Aspects
- Images are visually appealing and high quality.
- Information is well-categorized and comprehensive.
- Specifications in table format make it easier to read and understand.

User Feedback
The website provides detailed information, but content redundancy and heavy visuals affect efficiency and navigation experience.

User Rating: 7/10

Observations
- The slide feature for specifications improves readability and engagement.
- The interface allows users to consume information in smaller, manageable parts.
- It's great to have limited textual information and the option to read more.

Positive Aspects
- Better information presentation through interactive elements.
- Cleaner and more efficient navigation experience.
- The "Technical Details" section is separated, which avoids information overload.
- The design feels more functional and user-friendly compared to BYD.

User Feedback
- Introduce a fully functional configurator.
- Enhance the existing 3D view by allowing direct customization within it.

User Rating: 9/10

Participant 4: Chetan Bokde, 40
User Type: A great background in Transportation Design, good knowledge
Experience with Car Websites: Moderate - First-time EV explorer

In-person Testing (Laptop)
Duration - 15:55 mins.

Observations
- The public notice at the beginning was distracting.
- The feature slider was not easily visible due to low contrast, limiting interaction.
- Lack of lifestyle and India-centric images reduced relatability.

Positive Aspects
- Information is well categorized and structured.
- The website provides all necessary details effectively.
- Specifications at the bottom are clearly presented.
- Images are clear, focused, and distraction-free.

User Feedback
- Improve visibility of interactive elements (slider arrows).
- Add lifestyle visuals and Indian user context.

User Rating: 8/10

Observations
- The website is smooth and easy to navigate.
- Content is well categorized and structured.

Positive Aspects
- The configurator feature enhances interactivity.
- Auto-playing videos improve engagement.
- Clean background supports focus on content.
- The website provides all necessary details effectively.

User Feedback
- The website felt slightly cluttered, possibly due to brand style. (personal preference)
- User prefers a more minimal UI approach.
- Some color contrast improvements could enhance readability.

User Rating: 8/10

Participant 5: Dr. Rajiv Dutta Chowdhury, 56
User Type: Ambitious Interest in car exploration for a long time
Experience with Car Websites: Moderate - likes to explore about cars in detail

Remote Testing (Laptop)
Duration - 26:58 mins.

Observations
- The public notice was difficult to close, causing friction at the entry stage.
- User struggled initially with navigation.
- Feature sliders were not noticeable, leading the user to scroll through all content.
- The video playback was laggy, affecting the experience.

Positive Aspects
- The vehicle presentation using images and minimal text was appreciated.
- Information was clearly structured and easy to understand.

User Feedback
- Improve visibility of slider/navigation controls.
- Fix video performance issues.
- Introduce a 3D configurator feature for customization.

User Rating: 7/10

Observations
- The website was easy to navigate from the start.
- Arrow buttons for sliders were clearly visible, improving usability.

Positive Aspects
- Numerical specifications were well highlighted, making them easier to scan.
- Auto-play videos enhanced engagement.
- The configurator feature was highly impressive and interactive.
- Variant cards at the bottom were well-organized and scrollable, improving comparison.

User Feedback
The user felt highly satisfied with the overall experience due to clear navigation and smooth interactions. Interactive features like configurators and sliders made the website engaging and easy to use.

User Rating: 8/10

Quantitative Data

- Task completion rate - **100%**
- Satisfaction rate - **88%**
- User Experience Rating (1–10 scale) - BYD - **7.4/10**
- User Experience Rating (1–10 scale) - Porsche - **9/10**

Post-Testing

KEY USABILITY FINDINGS - BYD Website		SEVERITY AND IMPACT OF THE ISSUE
Public notice disrupts entry experience	3/5 users found it distracting or difficult to close	🔴 Critical | High Impact
Lack of configurator feature	4/5 users suggested “build your own car”	🔴 Critical | High Impact
Poor discoverability of sliders/features	4/5 users did not notice slider arrows	🟠 Major | Medium Impact
Video performance issues	3/5 users reported laggy or poor playback	🟠 Major | Medium Impact
Navigation confusion initially	3/5 users struggled at the start	🟠 Major | Medium Impact
Heavy images affect performance	2/5 users noted slow loading due to large visuals	🟡 Minor | Medium Impact
Content repetition and overload	2/5 users observed repeated info and long scroll	🟡 Minor | Medium Impact
Strong visual presentation and structure	5/5 users appreciated clean UI and organized content	🟢 Satisfactory Response

Observed User Challenges

- Users struggled at the entry point due to the public notice interrupting flow.
- Important interactive elements like feature sliders were not visible, leading to inefficient navigation.
- Lack of a configurator reduced engagement and personalization, especially when compared to competitors.
- Laggy videos and heavy images negatively impacted performance and user experience.
- Some users experienced cognitive overload due to repeated or excessive information.

Actionable Recommendations

1. **Improve Entry Experience**
   - Minimize or redesign the public notice as a non-blocking banner.
2. **Enhance Feature Discoverability**
   - Increase visibility of slider arrows (better contrast, size, animation cues).
3. **Introduce a Configurator**
   - Add a “Build Your Own Car” feature with options like color, wheels, and variants.
4. **Optimize Media Performance**
   - Compress videos and improve playback responsiveness.
   - Reduce image sizes without compromising quality.
5. **Improve Navigation Clarity**
   - Highlight key sections like “Models” more prominently on the homepage.
6. **Reduce Content Overload**
   - Avoid repetition and present information in progressive disclosure (tabs/sliders).

Proposed User-Centered Redesign Solutions (UCD-Based)

UCD PRINCIPLE	WHAT CAN BE ADDED
Usefulness	Add configurator to meet user goals of personalization. (more interactive exploration)
Effectiveness	Improve navigation and entry flow to support task completion. (time-saving)
Learnability	Make interactive elements more visible and intuitive. (users become aware)
Accessibility	Improve contrast and visibility of UI controls. (all features provided become accessible)
Satisfaction	Enhance engagement through smooth media and interactivity. (better user response)
Efficiency	Reduce loading times and scrolling effort. (saves time and effort)

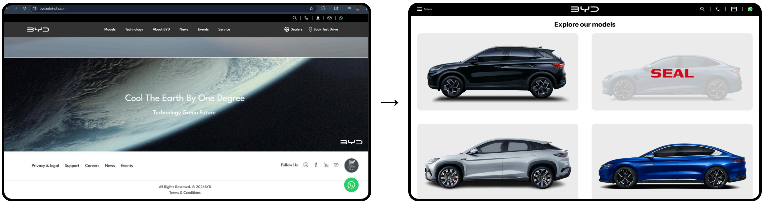
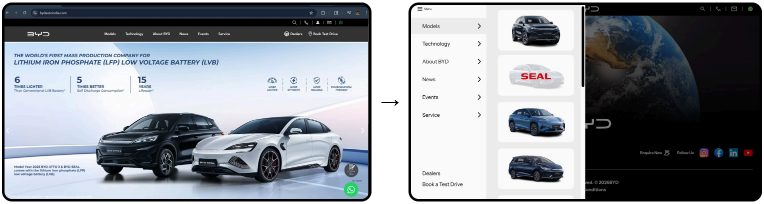
Menu
Suddenly everything else feels old fashioned
BYD SEALION 6

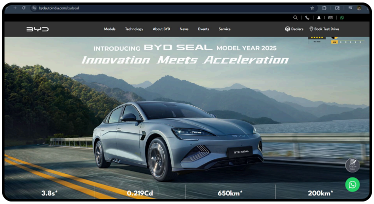
The distracting public notice has been removed, and the hero carousel has been enhanced for a clearer, more engaging first impression.



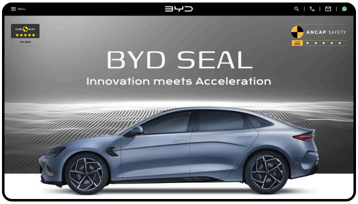
The homepage length has been extended by showcasing car models directly, improving visibility and user engagement.



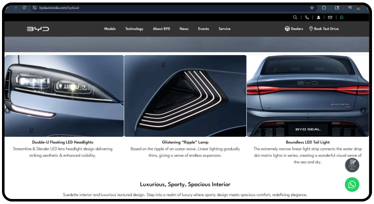
A well-structured navigation menu has been introduced to reduce clutter and create a more minimal interface.



→



The car model page has been redesigned to prioritize the vehicle visually, creating a more impactful and immersive showcase.



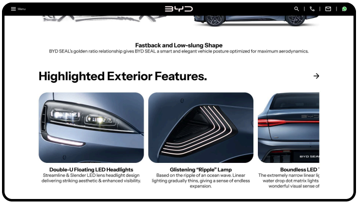
Double-U Floating LED Headlights
Streamline & Slender LED lens headlight design delivering striking aesthetic & enhanced visibility.

Glistening "Ripple" Lamp
Based on the ripple of an ocean wave. Linear lighting gradually thins, giving a sense of endless expansion.

Boundless LED Tail Light
The extremely narrow linear light strip connects the water drop dot matrix lights in series, creating a wonderful visual sense of the sea and sky.

Luxurious, Sporty, Spacious Interior
Suedette interior and luxurious textured design. Step into a realm of luxury where sporty design meets spacious comfort, redefining elegance.

→



Fastback and Low-slung Shape
BYD SEAL's golden ratio relationship gives BYD SEAL a smart and elegant vehicle posture optimized for maximum aerodynamics.

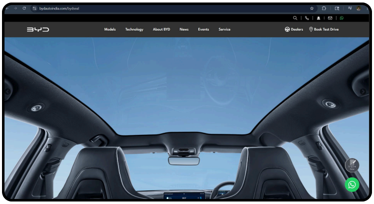
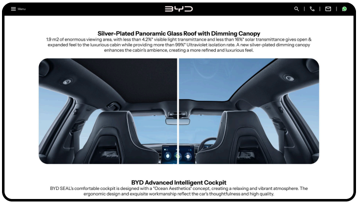
Clear, visible navigation arrows have been added to improve feature discoverability, replacing the previously hard-to-notice controls.



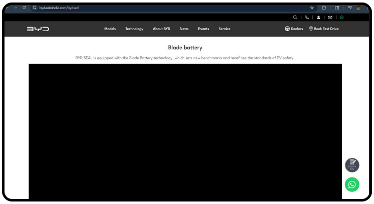
→



Silver-Plated Panoramic Glass Roof with Dimming Canopy
1.9 m2 of enormous viewing area, with less than 4.2%* visible light transmittance and less than 16%* solar transmittance gives open & expanded feel to the luxurious cabin while providing more than 99%* Ultraviolet isolation rate. A new silver-plated dimming canopy enhances the cabin's ambience, creating a more refined and luxurious feel.

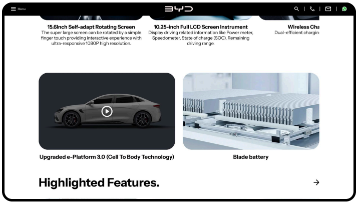
BYD Advanced Intelligent Cockpit
BYD SEAL's comfortable cockpit is designed with a "Ocean Aesthetics" concept, creating a relaxing and vibrant atmosphere. The ergonomic design and exquisite workmanship reflect the car's thoughtfulness and high quality.

A slider has been introduced to showcase the panoramic sunroof's open and closed states, replacing the previous static image with unclear controls.



Blade battery
BYD SEAL is equipped with the Blade Battery technology, which sets new benchmarks and redefines the standards of EV safety.

→



15.6Inch Self-adapt Rotating Screen
The super large screen can be rotated by a simple finger touch providing interactive experience with ultra-responsive 1080P high resolution.

10.25-inch Full LCD Screen Instrument
Display driving related information like Power meter, Speedometer, State of charge (SOC), Remaining driving range.

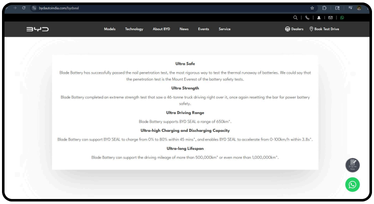
Wireless Cha
Dual-efficient chargin

Upgraded e-Platform 3.0 (Cell To Body Technology)

Blade battery

Highlighted Features.

Large and laggy videos have been replaced with smaller, well-integrated sections to ensure smoother playback.



Ultra Safe
Blade Battery has successfully passed the nail penetration test, the most rigorous way to test the thermal runaway of batteries. We could say that the penetration test is the Mount Everest of the battery safety tests.

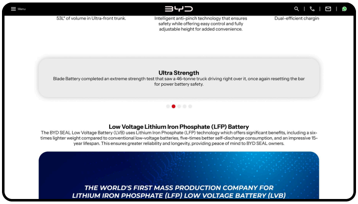
Ultra Strength
Blade Battery completed an extreme strength test that saw a 46-tonne truck driving right over it, once again resetting the bar for power battery safety.

Ultra Driving Range
Blade Battery supports BYD SEAL a range of 650km*.

Ultra-high Charging and Discharging Capacity
Blade Battery can support BYD SEAL to charge from 0% to 80% within 45 mins*, and enables BYD SEAL to accelerate from 0-100km/h within 3.8s*.

Ultra-long Lifespan
Blade Battery can support the driving mileage of more than 500,000km* or even more than 1,000,000km*.

→



53L* of volume in Ultra-front trunk.

Intelligent anti-pinch technology that ensures safety while offering easy control and fully adjustable height for added convenience.

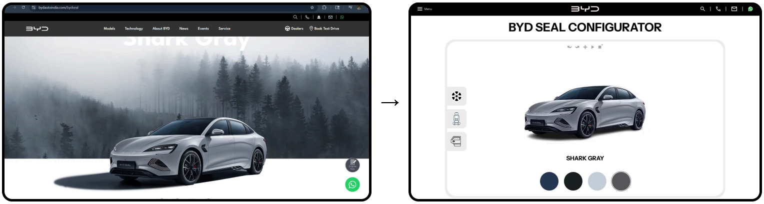
Dual-efficient chargin

Ultra Strength
Blade Battery completed an extreme strength test that saw a 46-tonne truck driving right over it, once again resetting the bar for power battery safety.

Low Voltage Lithium Iron Phosphate (LFP) Battery
The BYD SEAL Low Voltage Battery (LVB) uses Lithium Iron Phosphate (LFP) technology which offers significant benefits, including a six-times lighter weight compared to conventional low-voltage batteries, five-times better self-discharge consumption, and an impressive 15-year lifespan. This ensures greater reliability and longevity, providing peace of mind to BYD SEAL owners.

THE WORLD'S FIRST MASS PRODUCTION COMPANY FOR LITHIUM IRON PHOSPHATE (LFP) LOW VOLTAGE BATTERY (LVB)

Overloaded text has been replaced with a carousel that highlights each feature more clearly and effectively.



A highly requested configurator has been introduced, enabling real-time color changes with synchronized 3D car rotation.

Participant 1: Andrew Howard, 20 **Remote Testing (Laptop)**
User Type: Ambitious Interest in car exploration for a long time
Experience with Car Websites: Moderate - likes to explore about cars in detail

Existing Website Duration - 19:07 mins.

Observations
- The public notice was difficult to close, causing friction at the entry stage.
- User struggled initially with navigation.
- Feature sliders were not noticeable, leading the user to scroll through all content.
- The video playback was laggy, affecting the experience.

Positive Aspects
- The vehicle presentation using images and minimal text was appreciated.
- Information was clearly structured and easy to understand.

User Feedback
- Improve visibility of slider/navigation controls.
- Fix video performance issues.
- Introduce a 3D configurator feature for customization.

User Rating: 6/10

Redesign Solution Duration - 24:05 mins.

Observations
- The website was easy to navigate from the beginning, with no entry friction.
- Feature sliders were clearly visible and easy to interact with.
- Video playback was smooth and improved compared to the previous version.
- Users could quickly locate information without unnecessary scrolling.

Positive Aspects
- The presentation of vehicles with images and minimal text remained effective.
- Improved navigation made the experience more seamless and intuitive.
- Better visibility of interactive elements enhanced usability.
- Overall layout felt clean, structured, and not overloaded.

User Rating: 10/10

Participant 2: Mayank Chandak, 21 **In-person Testing (Laptop)**
User Type: Tech-savvy student and a dedicated automobile enthusiast
Experience with Car Websites: High – keeps himself updated with automotive trends

Existing Website Duration - 11:20 mins.

Observations
- The user searched directly using the search icon instead of scrolling through homepage.
- The search redirected correctly to the BYD Seal page, making the model accessible quickly.
- The video on the page gave a poor playback experience that felt more like a GIF than a smooth video.

Positive Aspects
- The presentation of the page felt visually appealing.
- Key features were highlighted clearly.
- Information about the vehicle was structured and easy to understand.

User Feedback
Add more specifications. Introduce a configurator feature, similar to what other automobile websites provide.

User Rating: 5/10

Redesign Solution Duration - 14:36 mins.

Observations
- The hero image carousel improved the first impression and engagement.
- Slider features were more noticeable and easier to interact with.
- Navigation felt smoother, with better access to model pages and features.

Positive Aspects
- Interactive animations enhanced the overall experience.
- The homepage design was well received and visually appealing.
- Model page features were presented clearly and effectively.
- Information was well organized and easy to understand.

User Rating: 8/10

Participant 3: Chetan Bokde, 40 **In-person Testing (Laptop)**
User Type: A great background in Transportation Design, good knowledge
Experience with Car Websites: Moderate - First-time EV explorer

Existing Website Duration - 15:55 mins.

Observations
- The public notice at the beginning was distracting.
- The feature slider was not easily visible due to low contrast, limiting interaction.
- Lack of lifestyle and India-centric images reduced relatability.

Positive Aspects
- Information is well categorized and structured.
- The website provides all necessary details effectively.
- Specifications at the bottom are clearly presented.
- Images are clear, focused, and distraction-free.

User Feedback
- Improve visibility of interactive elements (slider arrows).
- Add lifestyle visuals and Indian user context.

User Rating: 7/10

Redesign Solution Duration - 17:07 mins.

Observations
- Some elements like figures and alignment were not clearly structured in a straight line.
- Clickable elements on the homepage (BYD Logo) were not easily identifiable.
- Navigation was similar to before, with only minor improvements observed.

Positive Aspects
- The redesign felt like a refined update of the existing website.
- Hover interactions added some level of interactivity.
- Overall visual style (colors, fonts, animations) was decent and consistent.

User Feedback
- Introduce user scenarios and lifestyle images.
- Avoid over-highlighting; maintain a minimal and balanced UI.
- Reduce excessive curvatures for a more formal design language.

User Rating: 7/10

Participant 4: Mudassir Shah, 21 **Remote Testing (Mobile)**
User Type: Moderate digital student and automobile enthusiast
Experience with Car Websites: Moderate – familiar with browsing car models online

Existing Website Duration - 19:07 mins.

Observations
- The public notice screen created initial confusion and slowed the user at the beginning.
- The home screen felt small, making it harder to immediately locate the car models.
- Initially, the user struggled to locate the model section.

Positive Aspects
- Features are clearly highlighted.
- Categorization of headings and descriptions is well structured.
- Content is readable, concise, and not too bulky.
- The interface is comfortable to navigate and visually appealing.

User Feedback
The task became easier after the initial navigation challenge. The user suggested that the front page could be better organized to match user expectations more clearly.

User Rating: 6/10

Redesign Solution Duration - 20:11 mins.

Observations
- The homepage showed significant improvement in layout and usability.
- Slider features and animations were smooth and engaging.
- The panoramic sunroof interaction (open/close view) was simple and creative.
- Navigation and information flow were clear and easy to follow.

Positive Aspects
- Overall visual appeal was excellent with accurate and high-quality images.
- Configurator worked smoothly without lag, enhancing interaction.
- Information was well-presented with attention to detail.
- Alignment, structure, and categorization were highly appreciated.
- Reduced disclaimer improved the overall experience.

User Rating: 10/10

Participant 5: Dr. Rajiv Dutta Chowdhury, 56 **Remote Testing (Laptop)**
User Type: Ambitious Interest in car exploration for a long time
Experience with Car Websites: Moderate - likes to explore about cars in detail

Existing Website Duration - 26:58 mins.

A

Observations
- The public notice was difficult to close, causing friction at the entry stage.
- User struggled initially with navigation.
- Feature sliders were not noticeable, leading the user to scroll through all content.
- The video playback was laggy, affecting the experience.

Positive Aspects
- The vehicle presentation using images and minimal text was appreciated.
- Information was clearly structured and easy to understand.

User Feedback
- Improve visibility of slider/navigation controls.
- Fix video performance issues.
- Introduce a 3D configurator feature for customization.

User Rating: 6/10

Redesign Solution Duration - 24:08 mins.

B

Observations
- The homepage showed strong improvement with better layout and usability.
- Scrolling felt smooth, intuitive, and faster compared to the existing version.
- Slider arrows were clearly visible, making interactions easier.
- Feature carousel effectively highlighted key features without clutter.

Positive Aspects
- The panoramic sunroof slider interaction was creative and easy to understand.
- Features were explained clearly and in a user-friendly manner.
- Content was presented efficiently without taking excessive space.
- Overall presentation was clean, structured, and visually engaging.

User Rating: 8/10

Average BYD Rating (Official Website) - 6.0/10

Average BYD Rating (Redesign Website) - 8.6/10

The slightly longer time spent on the redesigned version is related to the emphasis on enhancing UI clarity and adding interactive elements (e.g., visible sliders, improved navigation). While activities could be completed quickly, visitors spent more time exploring the makeover, which felt more natural, entertaining, and informational than the previous website.

Feature-User Validation Table

Updated Features	User Validation
Improved Homepage (models visible, better layout)	5/5 users - Strong improvement in first impression and navigation
Better Feature Visibility (arrows, discoverability)	5/5 users - Major usability issue resolved successfully
Smooth Scrolling & Navigation	5/5 users - Reduced effort and improved efficiency
Reduced Disclaimer / Less Clutter	5/5 users - Improved entry experience and visual clarity
Cleaner UI (alignment, spacing, margins)	4/5 users - Enhanced readability and structure
Interactive Animations & Transitions	4/5 users - Increased engagement and modern feel
Feature Carousel (auto/scrollable highlights)	3/5 users - Helped in better feature discovery
Configurator (non-laggy, interactive)	3/5 users - Strong impact where noticed, needs more visibility
Optimized Content Density (less scrolling, no overload)	3/5 users - Better balance of information and usability
Panoramic Sunroof Interactive Feature	2/5 users - Unique feature appreciated but limited mentions

Conclusion

The redesign of the BYD website addresses all the key usability issues and provides improvements such as a - *clearer homepage layout, visible interactive elements (like arrows), reduced entry friction,* and the introduction of a *smoother, more responsive interface* significantly enhanced the overall user experience.

A/B testing showed that **users are more likely to prefer the new version over the existing website** due to its improved clarity, smoother interactions, and engaging features. Overall, the redesign aligns with UCD principles, making the experience more efficient, satisfying, and user-friendly compared to the existing website.
